

# Analysis Managed Service

## WHAT IT DOES

The Analysis Managed Service provides bespoke healthcare analytics that unlike expensive, generalist consultancies delivers continuity of expertise tailored to evolving customer needs.

Aimed at chief information officers, heads of information, and business intelligence leads of healthcare organisations and systems, it provides the NHS with additional analytical capacity and capability to deliver quality and efficiency improvement, and service transformation programmes.

## WHAT IT DELIVERS

The service offers sustained end-to-end collaboration, with a team of skilled experts in advanced analytics. You have the flexibility to tailor your level of service depending on demand and your specific needs. Each bespoke project will be scoped out with your appointed lead analyst, identifying the outputs and the resulting recommendations and methodology required.

### It comprises of key components including access to:

- a dedicated lead analyst acting as the key point of contact
- a team of experts skilled in advanced analytics including statistics, predictive modelling and healthcare economics
- academics and researchers at the Dr Foster Unit at Imperial College London
- a range of national data sets
- a greater level of support in understanding and interpreting insight within our suite of products

## How Imperial College Healthcare NHS Trust has benefited from a dedicated analyst delivering bespoke support and expertise in clinical benchmarking

Imperial College Healthcare NHS Trust has been a longstanding customer of Dr Foster with a dedicated, expert analyst who supports their mortality monitoring, market share analysis and efficiency indicator benchmarking. Dr Foster data is now integrated into strategic planning and service redesign and has been used to explore growth opportunities for services previously provided by other trusts.

“The benefit of having a dedicated analyst here is that they are a member of our team, they know exactly how we work. They understand straight away what we are asking, so the turnaround is really fast as a result.”

“We know we’re getting a really accurate data set back along with key analysis. If I was to try to match that capability within my existing team, I would have to train someone, risk them moving on and then have to train someone else – that’s a risk that doesn’t exist with this model.”

Ruth Holland, Deputy Chief Information Officer,  
Imperial College Healthcare NHS Trust

## BENEFITS

- ✔ Fast track and improve service transformation programmes with additional analytical capacity and capability.
- ✔ Knowledge transfer and upskilling of your staff in understanding the analytical techniques and interpretation of the analysis.
- ✔ Flex your level of service, scaling up or down, according to your evolving analytical needs.
