

Consultant Focus

WHAT IT DOES

Consultant Focus is an easy-to-use, simple presentation of a consultant's activity, case-mix and outcomes enabling benchmarking of performance at a local and national level.

Aimed at consultants, clinical leads and medical directors, it provides a comprehensive picture of the scope and nature of a consultant's practice, which supports the General Medical Council's appraisal and revalidation process.

WHAT IT DELIVERS

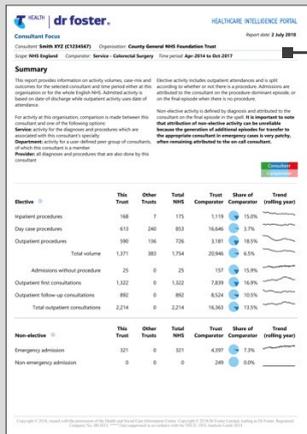

Consultants can view activity at their current organisation or for the NHS in England as a whole, over any number of months with up to five years' worth of data.

The three-page report covers admitted and outpatient volumes, case-mix and outcomes. It offers a choice in comparing the diagnoses and procedures associated with the consultant's specialty, a user-defined peer group of consultants or all similar activity at their current organisation.

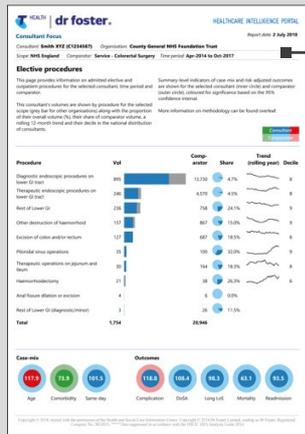

The report includes:

- 1. Summary** – An overview of overall volumes for elective procedures by care setting (inpatient, day-case and outpatient), outpatient consultations and non-elective admissions.
- 2. Elective procedures** – Summary-level indicators of case-mix (age, comorbidity, same-day) and risk-adjusted outcomes (complication, day-of-surgery admission, long length of stay, mortality, readmission) for elective procedures, as well as volumes, share of activity, trends and comparison to peers.
- 3. Non-elective diagnoses** – Summary-level indicators of case-mix (age, comorbidity, same-day) and risk-adjusted outcomes (complication, long length of stay, mortality, readmission) for non-elective diagnoses, as well as volumes, share of activity, trends and comparison to peers.

BENEFITS

- ✓ Gives consultants a picture of their activity, case-mix and outcomes compared to peers.
- ✓ Supports consultants with their General Medical Council appraisal process and revalidation.
- ✓ Presents a single source of information for consultants, appraisers and information teams.
- ✓ Provides a comprehensive description of the scope and nature, including scale and quality, of a consultant's practice.
